Allowable Subject Matter

- 1. Claims 2-7,10-13 and 17-21 allowed.
- 2. The following is an examiner's statement of reasons for allowance:
 - Applicant disclose and inventive concept relates to document transfer systems and in particular relates to such systems involving cryptographic protocols enabling a document to be obtained by a consumer upon payment to the owner of the document. Applicant's inventive concept is novel and innovative in the sense that it the owner provides the source with a second portion of the key, which can combine with said first portion to generate the complete key, and the owner does not provide the source with the second key potion and the third key portion is combined with the fourth key portion to generate a complete key. Saito (the closet prior art) teach a cryptography technique and electronic watermark technique are combined together and used. In a data content supplied to a first user, a first user data is entered as electronic watermark by a data management center, and the data content with an electronic watermark entered in it is encrypted using a crypt key and is supplied. The encrypted data content is decrypted using a crypt key distributed from the data management center and is used. In case it is to be stored, it is encrypted using another crypt key. Saito fails to teach owner provides the source with a second portion of the key, which can combine with said first portion to generate the complete key, and the owner does not provide the source with the second key potion and the third key portion is combined with the fourth key portion to generate a complete key.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

- 3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - b. Gruse et al (U.S. Patent No. 6,398,245) teach digital content data encrypted with a first encrypting key is decrypted using a first decrypting key, and re-encrypted using a second encrypting key. A second decrypting key is encrypted using a third encrypting key to produce an encrypted second decrypting key.
 - c. Davise (GB 2254752) teach an apparatus for combining digital video signals, in which digital key signals are combined to form composite digital key signals has a number of video layers, wherein each layer is arranged to receive a layer digital video input signal and includes processors for generating a layer key signal from the video signal. A combining combines the digital video input signals in response to key signals generated by the processors.
